

TITLE

ALL PURPOSE CLEANING MACHINE

ABSTRACT OF THE DISCLOSURE

An all purpose cleaning machine (10) includes a recovery tank (40) pivotable  
5 relative to a base assembly (12) and a solution tank (26) between an access position and a  
transport position. Hose reels (56, 58) are slidably received by movement in a radial  
direction inside the semicylindrical portion (72) of a J-shaped depression (70) for rotation  
therein. Hose reels (56, 58) hold hoses (62, 64) and are removable when it is desired to  
move the recovery tank (40) from its transport position to its access position by simply  
10 lifting them from the depression (70). In the transport position, tool channels (34, 48) are  
defined in the front (30) of the solution tank (26) and the back (46) of the recovery tank  
(40) for slideably receiving tools for support on the bottom faces of the tool channels (34,  
38).
